| | TO DO | IN PROGRESS | COMPLETE |
|---|---|---|---|
| **Satoshi** | | | |
| | | | Task 1: Remove google authentication from the login page. |
| | | | Task 1.1: For removing google auth just make sure to only have the login be email/username and password based |
| | | Task 2: Add logout functionality to the website. | |
| | | Task 2.1: Add a logout confirmation popup | |
| | | Task 2.2: Add a logout button/link on the nav bar on all pages (except for sign up and log in) | |
| | | Task 3: Add redirects based on log in and log out | |
| | | Task 3.1: When website loads, if no user logged in make sure every page redirects to login | |
| | | | Task 3.2: Adter a user signs up or logs in, they should be redirected to the home page |
| | | | Task 3.3: If there are sign up or log in issues, make sure the program does redirect but handles the validation errors |
| | | | Task 4: For the UI on the Sign Up page, make sure that the submit button for signing up reads "Sign Up" instead of "Sign Up" |
| | | | Task 5: Signing up should sign in the user and redirect. |
| | Task 6: Ensure that the user can not access any webpages except for sign up and log in prior to signing up or logging in | | |
| | Task 6.1: Remove all guest functionality for the website | | |
| | | | Task 6.2: Add a valid account check to the login code so that if invalid account info is entered, the website won't think a user has logged in |
| | Task 7: Have a way to reflect the user logged in across all pages | | |
| | Task 7.1: . On the search history page, list out the users name, to show it is their search history | | |
| | Task 8: Implement unit and acceptance tests for all features of the Log in, Log out , and sign up pages. | | |
| | | | Task 9: Remove the nav bar from signup/login pages |
| | Task 10: Implement and test input validation for the Activity and Vacation pages. | | |
| **Alex** | | | |
| | | | Task 1: Add acceptance tests for the database to show which information is being saved |
| | | | Task 1.1 (Example) Acceptance test for search for something, show that it shows up in one user's search history and not another. |
| | | | Task 2: Implement the database to maintain the user information over all webpages in the program |
| | | | Task 2.1: Track the user logged in, their search history, likes, etc. |
| | | Task 3: Implement a liking system for the cities | |
| | | | Task 3.1: Do based on favorites and add it to the database, with a list of favorited cities. |
| | | | Task 4: Add tests to ensure that the correct number of likes is added to the favorited cities across multiple user accounts and searches. |
| **John** | | | |
| | | Task 1: Implement the Prior Search Page | |
| | | Task 1.1:  Implement the functionality to get the prior search from the database | |
| | Task 1.2: Ensure that the right city info is properly loading into the field on the search page. | | |
| | Task 1.3: Write acceptance tests for the search history page, ensuring that it loads the correct information about the cities. | | |
| | | | Task 2: Add the functionality of defining the radius for the search field |
| | | | Task 2.1: Make sure that the correct distance is being gathered from the API |
| | | | Task 2.2: Make sure that no cities outside that radius are being added. |
| | Task 2.3: Add tests for the radius of the search field to the acceptance tests. | | |
| **Lauren** | | | |
| | | | Task 1: Change the nav bar color to be darker so that it is more visible and distinct on the page. |
| | | Task 2: Implement the updated ui on all webpages, so that the appearance of the website is consistent and cohesive. | |
| | | | Task 3: Make sure the show me the weather button on the main search page is on one line |
| | | | Task 4: Change the "Change Units" button to a toggle between celsius and fahrenheit |
| | | Task 5: Make sure that when the results load on the pages, there is not a scroll bar on the side of the page (aka all content should be in "one" page) (COMPLETE ON THE HOME PAGE) | |
| | | Task 6: Add acceptance tests for all aspects of the UI | |
| | | | Task 7: Make sure to update pages to reflect the features needed from project 1 (graph and images on analysis). (DEGREE SYMBOL COMPLETE ON HOME PAGE, ADD IMAGES TO THE ANALYSIS PAGE, NO NEED FOR GRAPH) |
| | Task 8: Add unit tests for the images on analysis page | | |
| **Jung** | | | |
| | | | Task1: Update the numbers in the tables to start at 1 and continually increase without resetting to one on the next page. |
| | | | Task 2: Add a next and previous button to the pagination on the vacation and activity pages. |
| | | | Task 3: If there are more than 5 pages of results, make sure to only show 5 pages at a time. |
| | | Task 4: Add more acceptance tests for the pagination for next and previous and show that it is updating which pages are on the screen (when there are more than 5) | |
| | | Task 5: Once the favoriting system is implemented, add a column for the number of favorites to the table. | |
| | Task 5.1: This column should also have the functionality to sort the results (like distance) | | |
| | Task 6: When sorting results, make sure that all pages are updated, so reload the page as a whole with the sorted results in the paginated pages. | | |
